

Safe and speedy

The AS365 N3 features exceptional capabilities to transfer patients from one hospital to another or to operate rapidly to accident sites. In addition to a very high speed, its high power reserve and its good OEI performance make it a safe aircraft to fly over urban areas or to perform SAR operations in difficult conditions. Its low vibration level and its high flight stability provide working comfort for medical attendants and a smooth ride for patients.

The AS365 N3 can be fitted with a four-axis autopilot and a weather radar to fly safely in demanding climatic conditions.

Safe and speedy

The spacious cabin of the AS365 N3 can easily accommodate all necessary medical equipment. It can be re-configured within minutes to allow for the addition of a second stretcher when necessary. The wide lateral access to the cabin makes loading of patients and access of the personnel quick and easy.

The AS365 N3's wide lateral access to the cabin combined with the enlarged bubble sliding doors make it better adapted to SAR operations such as hoisting.
